

B.Sc. Semester 5 (NEP)

Python Programming & Linux

Unit 1: Python Fundamentals and Unit 2: Functions, Modules & File Handling

Practical Journal Questions

- Q1.** Write a Python program to accept user name and age as input and display them using proper formatting.
- Q2.** Write a program to perform all arithmetic operations (+, -, *, /, %, //, **) on two user-entered numbers.
- Q3.** Write a program to demonstrate different data types and type conversion (int, float, string).
- Q4.** Write a program to calculate the area of a circle and rectangle using user input.
- Q5.** Write a program to check whether a number is positive, negative, or zero and also determine whether it is even or odd.
- Q6.** Write a program to find the largest among three numbers using conditional statements.
- Q7.** Write a program to calculate student grade based on marks entered by the user.
- Q8.** Write a program to print all even and odd numbers between 1 and N using loops.
- Q9.** Write a program to generate the multiplication table of a given number.
- Q10.** Write a program to find the factorial of a number using a loop and a function.
- Q11.** Write a program to generate the Fibonacci series using a function.
- Q12.** Write a program to check whether a number is prime and palindrome.
- Q13.** Write a program to count digits and find the sum of digits of a given number.
- Q14.** Write a program using a lambda function to find the square and cube of a number.
- Q15.** Write a program using the math module to calculate square root, power, and area of a circle.
- Q16.** Write a program using the random module to generate 10 random numbers and find the largest among them.
- Q17.** Write a program to perform insertion, deletion, searching, and sorting operations on a list.
- Q18.** Write a program to create a tuple and find the maximum, minimum, and count of a given element.
- Q19.** Write a program to create a dictionary for student details and perform add, update, and delete operations.
- Q20.** Write a program to perform union, intersection, and difference operations on two sets.
- Q21.** Write a program to count vowels, words, and characters in a string.
- Q22.** Write a program to reverse a string and check whether it is a palindrome.
- Q23.** Write a program to create a text file, write data into it, and then read the contents from the file.
- Q24.** Write a program to count the number of lines, words, and characters in a text file.
- Q25.** Write a program to demonstrate exception handling using try, except, and finally by handling ZeroDivisionError and ValueError.
